Tribologik/ AMRRI Hammond Training Session Surpasses Expectations

Twenty people have attended the first ever training session provided in the new classroom inaugurated by Tribologik Corporation at its Hammond IN facility.

This 4-day class, provided by Matt Spurlock, Vice-President of Advanced Machine Reliability Resources Inc. (AMRRI), covered International Council for Machinery Lubrication (ICML) preparation requested for the acquisition of the Machine Lubrication Technician and Machine Lubricant Analyst Level I certificate in accordance to ISO 18436-4 <http://lubecouncil.org>

According to participants, the objective - teach participants on how to transform a reactive lubrication process, to accurate and proactive – was not only met but surpassed.

Satisfied attendees emphasized the qualifications of the instructor, his experience and his ability to address in-depth issues and answer complex questions. Others commented on the well focused, concrete and practical course content and on the lively, dynamic and interactive format.

It must also be mentioned that the new air conditioned, well lit classroom was appreciated as well.

Training at PMC/Tribologik

Training has been picking up at PMC/Tribologik in 2015, and 2016 promises to be very busy as well. Besides the March event in Hammond, we have delivered many oil analysis training sessions over the last two years to a variety of industries in both the U.S. and Canada, including power plants, city bus fleets, industrial corporations and natural resources companies.

This is an indication that the awareness raising and education work that we have been carrying for years is bearing fruit and that more and more enterprises now understand that oil analysis can not only contribute to reduce their maintenance expenses but also enhance productivity, profitability and fluidity of their operation, and contribute to the extension of the useful life of their equipment.

In this perspective, our training sessions will improve the competence of your maintenance employees and keep them abreast of the best lubrication and maintenance practices. They will learn how to manage properly their lubricants inventories, how to preserve them from contamination, how to extract a sample without contaminating it, and why comply with proper handling, storage and house keeping procedures.

Forewarned is forearmed says an old proverb. Our experienced instructors will show you how to translate this proverb into reality, whether in our Hammond or Montreal premises or, if you prefer, we'll be pleased to travel to your facility or a hotel nearby.
